Key Highlights of our DW/BI and Analytics Services

We ensure you have 24/7 access to the data and gain real-time insight into transactional data, understand data patterns and be alerted to key events and data anomalies.

Timely Insights

Kastech has extensive experience in extending traditional reporting to next level in the form of advanced analytics and data visualizations, using leading BI and analytics tools.

Advanced Analytics

We have dedicated teams and tools to continuously monitor the database to detect any performance issues and address the same.

Continuous Monitoring

We design and develop our own ETL tools and/or use proven DTS tools and utilities for data extraction, transformation and loading to ensure relevant data is available for analysis and business decisions.

ETL & Data Transformation Services

We evaluate the various DW/BI and analytics tools and technologies available in the market and recommend the best suited option based on your business needs and budget constraints.

Technology & Tools

Right from network quarantines to encryptions, we ensure the data warehouse is equipped with the best-in-class security features to protect your data.

Highly Secure

We easily integrate the raw information from various data sources and map data elements to develop a Data warehouse. We deliver a complete data solution to park huge amount of data into a well-defined data storage for decision support and data analysis.

Data Integration and Data Storage

We perform in-depth study of existing Data Warehouse architecture and recommend our strategy and roadmap for significant improvements and opportunities as per your business needs.

Strategy & Roadmap

Kastech Differentiators

Experience & Expertise

1. Highly skilled resource pool
2. Extensive experience working with leading BI and data analytics tools

Customer Centric

1. We think beyond what we committed in SOWs; dedicated account management team
2. Proactive advisory services and solutions
3. We have also built proprietary data conversion and data analytics tools to address specific business needs and pain points

Flexibility

1. Flexi Pricing models
2. Blended service delivery model for maximum cost benefits
3. Data Analytics as a Service Model

Quick Transition

1. Quick & proven transition methodology
2. Knowledge Transfer to identified personnel in a seamless fashion
